

# Construction firm simplifies access to cloud-based apps

Dillen Bouwteam, a Belgian construction firm, wanted to move more applications into the cloud, but was worried about security. For example, on construction sites, one computer is used by many people, so identity management is very important.

The company augmented its Active Directory service with Azure Active Directory and Azure Multi-Factor Authentication.

***The result: Dillen Bouwteam expanded its use of cloud services in a way that keeps data safe and is convenient for employees and partners to use from anywhere.***

Reduce the cost and complexity of IT

[Back to solution slide](#)

“Our users want to get into their applications and get their work done as quickly as possible. They can do that more easily with Azure Active Directory.”

Toon Dillen, IT Manager, Dillen Bouwteam

-  Lowered IT costs and simplified application access by deploying all apps in Azure
-  Reduced email costs by 80 percent by moving to Office 365
-  Decreased amount of time IT staff spends on password-reset problems
-  Created a centralized way for employees to get to all of their applications with Azure Active Directory
